Goal: tool
{tool} is sufficiently trustworthy
Goal: toolAppro
{tool} is appropriate for {contex}
Context: patternContext
{process}
Goal: toolProv
{tool} has required assurance
Context: provenance
determined required integrity of tool: {required tool integrity}
Goal: toolQualify
{tool} is qualified to the required standard
Context: integrity
Tool achieved integrity level: {tool integrity}
Goal: objectives
{tool} meets its defined objectives
Context: objective
Tool objective: {objective}
Goal: evaluations
Evaluations of tool operation demonstrates that the defined tool objective is met
Goal: toolDev
The development process of the tool ensures the objective is met
Goal:evalConf
Set of evaluations performed provide sufficient confidence in {tool}
...
Strategy: evaluations
Argument over each evaluation
Strategy:toolDev
Argument over tool development process
Context:activities
Lifecycle activities requiring consideration determined by {required tool integrity}:{activities}
no. of {evaluations}
no. of {activities} in tool development process
Goal: evaluation
{evaluation} demonstrates correctness of {tool}
Goal: activityTrust_Mo...
{activity} is sufficiently trustworhty
..
Context: criterion
Defined criterion: {criterion}
Goal: evalRes
{evaluation} result demonstrates defined criterion is met
Justification: r...
{rationale}
Goal: evalAppropriate
{evaluation} result is appropriate for evaluating {tool}
Context:artefactVersion
Artefact version: {version ID}
Context: artefactDate
Artefact date: {date}
