Context: compXDefinition
The {component} is defined through its {local policy} and {architecture}
Goal: compX
{component} enforces its {local policy}
Assumption: para...
{assumptions}
Goal: localPolAddn
{local policy} is realised through the design of the {component}
Module: threats
Threats are mitigated, and will therefore not negatively influence the security of the component
threats
Module:compXfoundProps
Properties required of the Adaptive MILS execution platform components by {component} in order to enforce {local policy} are assured
too, person, organisation, artefact, technique, trusted software component
Context: tierN...
Tier n design of {component}
Strategy: localPolAddn
Argument over desired behaviour and requirements of {component} at {tier n}
Module:statesAndTransitions
The desired behaviour of {component} is realised trhough conformance to {states} and {transitions}
statesAndTransitions
no. of reqs at {tier n}
Goal: tierNreqAddn+1
{tierNreq} addressed through the realisation of the design at tier n+1
Goal: tierNreqSat
{tierNreq} demonstrably satisfied through {evidence item provided} at {tier n}
n++
Evidence: ti...
Evidence of satisfaction of {tierNreq}
