Goal: certificationAssurancePlane
The certification assurance plane verifies that the model (in current and next configurations chosen by adaptation plane) satisfies the system properties, by generating, collecting and analysing evidence
Context: planeDefinition
The Adaptive MILS system model describes the plane and the {architecture} of the plane
Module: interface
Interaction between components and compositions of componets of the plane is as defined by the security architecture
interface
Strategy: AM-ETB
Argument over the functions provided by the AM-ETB
Goal: certAssurArt
The AM-ETB generates a certification assurance artifact as the unifying framework for assurance and assurance composition
Goal:propConstraints
The AM-ETB will provide a framework for propagating system-level and inter-component constraints
Goal: checkArguments
The AM-ETB shall replay and recheck the arguments, so that a certifying agent is able to replay and check any part of a completed certification argument development, relative to explicitly stated assumptions
Goal: evidenceClaims
The AM-ETB will produce checkable evidence to support the claims
Goal: claimsDB
The AM-ETB will maintain a database of the claims, proved and unproved, which serve as baseline for indication of safe and secure functioning of the system
Evid...
Claims database
Goal: evidenceColl
Track and collect evidence resulting from analysis of system components, which is needed for certification
Goal: evidenceQual
The evidence collected is explicit so that it can be examined, replayed and maintained even as the constituent components are modified
Goal: evidenceReview
The AM-ETB will check the consistencey of evidence and provides automated review of evidence as a proxy for certification experts
Goal: evidenceChange
The AM-ETB shall ensure the maintenance of evidence against changes to the inputs
Goal: evidenceStorage
Collected evidence is stored and maintained in the evidence repository
Evide...
Evidence in evidence repository
